

The Student Innovation Fellowship (SIF) Program collaborates with community partners, government agencies, and for-profit companies to enhance learning and research at Georgia State University through the use of innovative technology. SIF allows students to develop consulting expertise and share ideas on emerging technologies and instructional innovations. SIF projects utilize digital curation, integrated marketing media platforms, web development and content, 3D modeling, and community outreach. Sample clients include Maps Atlanta, Manuel's Tavern, Homeless Resource Project (Dream Machine (now Dream Connect)), and the Atlanta Migration Worker Research Project. For more information about the SIF Program, please go to their website:
